Dual Bay Semi-Private Treatment Room

The Dual Bay Open Treatment Room is designed to add an elegant feel to your practice while minimizing the amount of space required per treatment room.

Utilizing the pass-through concept from the hallway into the rear treatment consoles allows a rapid non-intrusive method to resupply the treatment room for upcoming procedures.

The Symmetry 4.0 Central Island Treatment Console reduces your startup cost by requiring only one x-ray unit per two treatment rooms.

As always we at Symmetry have designed these rooms to be standardized and fully ambidexterous making it functional for all providers. This allows for rapid growth or the sale of your practice without having to modify or purchase new equipment.
